Casting design wall sign with transfer

Instructions No. 1595

Difficulty: Advanced

Working time: 30 Minutes

With **casting design and transfer Marker** you will succeed in designing this exquisite wall sign even as an untrained person.

Wall sign in ceramic-look

The wall sign is created with casting design. For this, fine white casting compound is mixed according to the product instructions. Before the casting compound is poured in, an old pin cap is attached to the casting mould with hot glue. This will later become a hanging hole. Then the white compound is filled into the round casting mould to a thickness of approx. 5 mm. After it has dried well, the cast disc is removed from the mould

Flower borders as printed

Download the motif template in colour using a laser printer. Place the flower borders with the printed side on the cast mould. Now the Paper is printed on the white side with the transfer Marker painted. In this way the colour particles of the printout are transferred to the wall sign. Stroke with a wooden spatula or folding leg firmly over the Paper. As soon as you remove it afterwards the color print is transferred.

Finish with handlettering

Label the designed mural according to your personal taste. Do small writing exercises with a pencil on a sheet of paper Paper. Then you will surely succeed perfectly in placing it as a handlettering design with a golden paint marker or another pen on the disc.

Must Have

Video

KREUL "Transfer Marker", Edge

Line width: 1 - 5 mm
Width: 0.5 cm
